Project Name	Smart Library Request Workflow in ServiceNow
Maximum Marks	2Marks

Customer Problem Statement:

Currently, the library system is managed manually or through disconnected systems, making it difficult for users to request, track, and manage books efficiently. Users face delays in approvals, lack of real-time updates, and difficulty in searching or reserving books. Librarians also struggle with managing requests, tracking issued books, and maintaining records.

Customer Problem Statement (Example)

Title: Smart Library Request Workflow in ServiceNow

Customer / Users: Students, Faculty Members, Librarians

Problem Statement:

Students and faculty members need an **efficient** way to request and access library books, but the current system is manual and lacks automation. Users are unable to track request status in real time, and librarians face difficulty managing multiple requests, approvals, and records. This results in **delays**, **inefficiency**, and **poor user experience**.

Context / Situation: The existing library process involves manual book request submission, physical verification, and record maintenance.
There is no centralized digital system to handle requests, approvals, and tracking.

Key Problems:

- No centralized platform for managing book requests
- Delays in approval and processing
- Lack of real-time notifications and tracking
- Manual errors in record keeping and fine calculation
- Poor visibility of book availability
- Manual errors in record keeping and fine calculation
- Poor visibility of book availability

Impact: Increased workload for librarians • Time-consuming process for users • Higher chances of human errors • Reduced efficiency in library operations

Desired Outcome: To implement a **smart, automated library request workflow** in ServiceNow that allows users to **easily** request books, track status, receive notifications, and enables librarians to efficiently manage approvals and inventory.

Proposed Solution (Brief): Develop a **ServiceNow** based solution with a user-friendly portal, automated approval workflows, notification system, and reporting.

Success Criteria:

- Faster request processing time
- Reduced manual intervention
- Higher user satisfaction
